

BLESSON C BIJU *AI Engineer*

blessoncbiju123@gmail.com | +91 7994161760 | Chirayil PuthenVeedu, Venpala PO, Thiruvalla, 689102 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

AI Developer with 1 year of experience building intelligent AI-powered applications and automation solutions. Passionate about creating innovative products using Generative AI, AI agents, and modern web technologies. Skilled in developing scalable, real-world AI solutions with a strong focus on problem-solving, creativity, and delivering impactful user experiences. Experienced in working on end-to-end application development, from designing backend systems to integrating AI capabilities into user-focused products. Strong understanding of modern AI workflows, automation pipelines, and cloud-based deployment practices. Quick learner and collaborative team player committed to building efficient, production-ready applications that solve complex business challenges while continuously exploring emerging AI technologies and industry advancements.

PROFESSIONAL EXPERIENCE

Adam Finastra <i>AI Engineer</i>	05/2025 – Present Kozhikode
- Built AI-powered applications and intelligent automation systems using Generative AI and modern backend technologies - Developed AI-driven marketing and content generation workflows capable of generating captions, creative assets, and platform-based content automatically - Worked on AI agent workflows, API orchestration, and automated processing pipelines for scalable business operations - Implemented backend systems using Python, Django, FastAPI, Celery, Redis, and PostgreSQL for handling asynchronous tasks and high-performance workflows - Integrated LLM-based features, multimodal AI capabilities, and external APIs into production-ready applications - Contributed to cloud deployment, backend optimization, and scalable architecture design for AI applications hosted in production environments - Collaborated closely with product and development teams to build user-focused AI solutions with improved efficiency and automation	
Techolas Technologies <i>Data Science Intern</i>	07/2024 – 04/2025 Kochi
- Analyzed and processed large datasets using Python, SQL, Pandas, and NumPy to extract meaningful business insights - Developed and optimized machine learning models for predictive analytics and performance improvement - Worked on data preprocessing, feature engineering, and model evaluation techniques for real-world datasets - Created interactive dashboards and visual reports using Tableau and Power BI to support data-driven decision-making - Fine-tuned machine learning models and improved prediction accuracy using hyperparameter optimization techniques - Collaborated with teams to present analytical findings and improve reporting and business workflows	

TECHNICAL SKILLS

Programming Languages — Python R SQL JavaScript
AI & Generative AI — Generative AI Large Language Models (LLMs) AI Agents Retrieval-Augmented Generation (RAG) Prompt Engineering NLP Workflow Automation Multimodal AI
Backend Development — Django FastAPI REST APIs API Integration Backend Architecture Authentication Systems
Asynchronous & Scalable Systems — Celery Redis Background Task Processing Queue-Based Workflows Scalable System Design
Databases & Storage — PostgreSQL SQL Vector Databases(chromaDB)
Frontend & Integration — React Frontend Integration API Communication
Cloud & Deployment — AWS EC2 Cloud Deployment Linux Server Management
Machine Learning & Data Processing — Machine Learning Deep Learning Data Preprocessing Model Evaluation Exploratory Data Analysis (EDA) Scikit-learn
Tools & Technologies — Git GitHub Tableau Power BI
Soft Skills — Problem-solving Analytical Thinking Collaboration Adaptability Communication

LANGUAGES

English — Proficient, **Malayalam** — Native

CERTIFICATIONS

Data Science Foundations - Great Learning

Basics of Exploratory Data Analysis (EDA) - Great Learning

PROJECTS

AI Marketing Automation Platform

- Developed an AI-powered marketing platform designed to automate the creation of digital marketing content for different social media platforms
- Built features for generating AI-based captions, marketing text, and creative visual assets tailored for platform-specific posting requirements
- Implemented intelligent workflows that allowed users to generate content, preview outputs, schedule posts, and manage automated publishing processes from a single system
- Worked on integrating Generative AI models for text and image generation to streamline content creation and reduce manual marketing effort
- Designed backend systems for handling asynchronous AI tasks, scheduling operations, and workflow automation using Celery and Redis
- Developed scalable APIs and backend services using Django and FastAPI to support real-time processing and smooth frontend integration
- Integrated external APIs and automation pipelines to support social media workflow management and content delivery processes
- Built frontend interaction flows and preview functionalities to improve user experience and simplify campaign management
- Contributed to deployment, backend optimization, and cloud-based infrastructure setup for running AI workflows in production environments
- Focused on building a practical AI-driven product that combines automation, content generation, and workflow management into a unified platform

AI Assistant Platform

- Developed an AI-powered conversational assistant for an educational platform to help users discover courses, navigate learning resources, and improve onboarding experience
- Built intelligent chatbot workflows capable of guiding users through course exploration, registration, sign-in assistance, and platform navigation in a user-friendly manner
- Designed conversational interaction flows to simplify user engagement and improve accessibility for new users interacting with the platform
- Integrated backend APIs and workflow automation to support real-time chatbot interactions and scalable application performance
- Worked on frontend and backend integration for seamless communication between the chatbot system and platform services
- Contributed to building the first production version of the AI assistant with plans for future Retrieval-Augmented Generation (RAG) integration for contextual and knowledge-based responses
- Focused on improving user experience, conversational flow accuracy, and scalable AI-driven interaction systems for educational use cases
- Contributed to the first production release of the AI assistant with future plans for Retrieval-Augmented Generation (RAG) integration
- Assisted in designing scalable backend architecture for supporting AI-driven educational workflows and automated assistance systems
- Improved chatbot usability by optimizing conversational flows, navigation support, and interaction accuracy

Emotion Detection System

- Developed a real-time facial emotion recognition system using OpenCV and deep learning techniques for emotion classification
- Trained emotion detection models using FER-2013 and Kaggle-based facial expression datasets for recognizing multiple emotional states
- Implemented real-time face detection and emotion prediction workflows for live video stream processing applications
- Worked on image preprocessing, dataset handling, and model training to improve prediction performance and detection accuracy
- Built computer vision pipelines for facial feature extraction and emotion analysis using deep learning methodologies
- Applied machine learning and computer vision concepts to develop practical human emotion analysis applications
- Explored real-time inference techniques and optimized detection workflows for smoother video-based emotion recognition
- Integrated OpenCV-based processing pipelines for face detection, image transformation, and real-time prediction handling
- Strengthened practical experience in deep learning, computer vision, and AI model implementation through hands-on project development
- Focused on improving system responsiveness, prediction consistency, and real-time processing capabilities for AI-driven vision applications
